## **Ex.1. Simple Web Page Design using Html 5**

**URK17CS127**

**Date :**

**Create a document that conforms to HTML5 standards and has the following elements:** doctype, html, meta (in the revised html5 format), title, head, body, div, p, span, headings, image, anchor, table, list, html comment

1. Your site is very simple. It consists of a header, footer and 3 sections. Each section contains a sub heading and some text. You can make it dummy text, it doesn't matter.
2. Section1: dummy text + all types of hyper links [external link with target, internal link, bookmark, email link, phone link, and clickable image].
3. Section 2 dummy text + definition list, ordered nested List and unordered nested list.
4. Section 3: dummy text + table in the given format to display information in rows and columns. (use caption, thead, tbody, tfoot, rowspan and colspan)
5. You are NOT allowed to use <br> tag and any CSS.
6. Appropriate use of HTML comments.
7. Use <span> to highlight the text with different color.
8. All HTML pages must pass the official HTML5 specifications via <http://validator.w3.org/>
9. Publish your website live on web using any free web hosting services (000webhost)
10. Use the mockup illustration page given in [courses.karunya.edu](http://courses.karunya.edu)
